

```
class DivisionCB {  
    public static void main(String[] args)  
    {  
        int a = 10, b = 5, c = 5, result;  
        try {  
            result = a / (b - c);  
            System.out.println("result" + result);  
        }  
  
        catch (ArithmeticException e) {  
            System.out.println("Exception caught:Division by zero");  
        }  
  
        finally {  
            System.out.println("I am in final block");  
        }  
    }  
}
```
